DINOSAURS

A Gateway to Early Childhood Dinosaur Discovery

This template is based on dinosaur tracks that are well known from the east coast of North America. We don't know exactly what kind of dinosaur made them, but we do know that it was relatively small and walked on two legs. This dinosaur's trackway is narrow with one foot nearly in line with the next, as if on a tightrope, and 40 inches between the toe of one foot and the heel of the next.
